

### In the Claims

1. – 4. (Cancelled)

5. (Previously Presented) A suede artificial leather comprising a fiber-entangled substrate mainly containing ultra-fine polyester fibers with a fiber fineness of 0.7 dtex or less and a polyurethane, wherein said suede artificial leather is dyed, said polyurethane contains yellow pigment, red pigment and blue pigment, and said artificial leather satisfies all of the following properties (1) through (3) as measured by the methods described in the Specification;

- (1) the infrared reflectance at 850 nm is 60% or more;
- (2) the surface temperature during light irradiation is 105°C or lower;
- (3) the light fastness is class 3 or better.

6. (Previously Presented) The suede artificial leather, according to claim 5, wherein the polyurethane is mainly a polycarbonate-based polyurethane.

7. (Previously Presented) A method for producing a suede artificial leather excellent in light fastness comprising impregnating a fiber-entangled substrate mainly containing ultra-fine polyester fibers having a fiber fineness of 0.7 dtex or less with a polyurethane solution, wherein the polyurethane solution contains yellow pigment, red pigment and blue pigment in such a manner that the coagulated film of the polyurethane solution satisfies all the following properties (4) through (6) when it is evaluated according to the methods described in the Specification;

- (4) the infrared reflectance at 850 nm is 60% or more;
- (5) the discoloration ratio after reduction cleaning is 20% or less;
- (6) the chroma is 10 or less.

8. (Previously Presented) The method for producing a suede artificial leather, according to claim 7, wherein a polycarbonate-based polyurethane is mainly used as the polyurethane.

9. (New) The suede artificial leather according to claim 5, wherein the pigments are at least one selected from the group consisting of diketopyrrolopyrrole pigments, anthraquinone pigments, perylene pigments, perynone pigments, quinacridone pigments, azo pigments, polyazo pigments, condensed azo pigments, imidazolone pigments, phthalocyanine pigments, isoindoline pigments, indigo pigments, thioindigo pigments, azomethine pigments, azomethine-azo pigments, dioxazine pigments, indanthrone pigments, flavanthrone pigments and pyranthrone pigments.
